Art Unit: 1712

***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-23 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Claim 1 recites a composition featuring as one of the essential ingredients a compression set additive that is added in "an effective amount". However, this parameter is not defined anywhere in the Specification. In view of the Applicants assertion that Conway does not anticipate the claims because the amount of acetylenic alcohol recommended therein would not be sufficient to obtain the intended compression set properties, it is now appreciated that it is of utmost importance that the phrase "effective amount" be particularly defined. In responding to this rejection, the Applicants should be careful not to introduce new matter into their disclosure. The Applicants are also required to delineate what is meant by an effective amount of addition-cure catalyst.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the

Art Unit: 1712

treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or  
(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 1, 3-5, 11-13, and 19-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Conway et al., U.S. Patent # 5,859,094.

The Applicants have alleged that Conway does not qualify as an anticipatory reference insofar as the acetylenic alcohol compound, which is to be added as a catalyst inhibitor, would not be made available in quantities large enough for it to successfully function as a compression set additive. While the Applicants have not expressly defined what constitutes an *effective amount* of a compression set additive, it is noted that the quantities added in the Examples would represent less than 1 wt percent of the composition. Conway teaches that the catalyst inhibitor, or acetylenic alcohol for the purpose of this rejection, may be incorporated in an amount corresponding to up to 10 wt percent of the composition. Accordingly, Conway does, in fact, anticipate the claim the range 0 to 10 wt percent fully encompasses the range of zero to one percent practiced in the examples.

***Allowable Subject Matter***

Claims 6-10, 21, and 23 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, first paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
